

Hoàng Đức Bình

UI/UX Designer

UI/UX Designer with 5 years of experience designing mobile and web apps, from user research to prototypes and design systems. Has designed products in EV charging (5,000+ charging sessions per day), digital health, AI-integrated shopping (50,000+ downloads) and digital insurance. Turns complex business operations into clear, easy-to-use experiences.

Education

Academy of Journalism and Communication

Major: Department of Multimedia Communication

Core Skills

- **Research & Analysis:** Business Analysis, UX Research, Customer Journey Mapping, Information Architecture
- **Design & Prototyping:** Wireframing (Low/High-Fi), Prototyping, Interaction Design, Visual Design, Figma, Adobe.

Work Experience

1. CHTlab Technology research and development joint stock Company — 2024 - 2026

Role: Senior UI/UX Designer, responsible for the user experience of products across multiple domains, and in charge of product strategy on one project. Collaborates with relevant departments to deliver the products.

- Owned the end-to-end design process: user research, experience flows, wireframes and prototypes through to the finished interface.
- Turned complex business operations (payments, financial transactions, bookings, health monitoring) into clear, easy-to-use task flows.
- Designed for diverse user groups, from electric car and electric motorbike drivers to novice and professional investors.
- Designed real-time data visualization through maps, charts, dashboards and market-volatility alert systems.
- Designed features tied to safety and trust: emergency alerts, secure wallet management, multi-method payments.
- Extended the experience across platforms (mobile app, Zalo Mini App, Telegram Mini App) so users can act quickly without installing another app.
- Brought AI into the experience: search, product comparison and a personalized assistant. Contributed to product strategy for an AI-integrated finance project.

2. REDDOT Technology Company — 2023- 2024

Role: Junior UI/UX Designer, responsible for the user experience of financial and digital insurance products.

- Analyzed business operations to turn complex financial and insurance processes into clear user flows.
- Designed a safe, trustworthy experience for sensitive actions such as transactions, e-wallets and contract issuance.
- Simplified the steps of fee calculation, insurance purchase, claims and renewal through design combined with automation.
- Designed a management portal with automated reminders and processing steps, helping users track contracts and claims easily.
- Presented real-time market data through easy-to-read charts to support investors' decisions.
- Optimized transaction flows for a smooth, trustworthy experience for investors and a transparent, fast one for customers.

3. Nexrise Solution Technology Company — 2022- 2023

Role: Junior UI/UX Designer, responsible for the user experience of projects in e-commerce and education.

- Designed an intuitive product search flow that helps users find what they need faster.
- Optimized payment, registration and plan-purchase flows, including digital-currency transactions.
- Designed clear, easy-to-browse and easy-to-compare category interfaces.
- Designed progress-tracking dashboards and management tools suited to user groups with different needs (students and teachers).
- Built a secure e-wallet connection interface that links traditional online shopping with decentralized finance.

4. Avitex Technology Company — 2021- 2022

Role: UI/UX Designer, designing and researching app and web products to the requirements of the company and its clients.

- Designed and researched UI/UX for app and web products, meeting the needs of both the company and its clients.
- Built a Design System so products share a common design foundation.
- Created visual prototypes and an icon set for the product system.
- Collected user data through analytics reports, task analysis and participatory design techniques.
- Used user data for iterative improvements, raising user satisfaction.

Featured Projects

1. EVSAFE – Smart EV Charging Network

- **Context:** Users with business needs, along with electric car and electric motorbike drivers, need to find stations, book, charge and pay in one seamless experience.
- **Insights and problems:**
  - Charging station information is scattered across brands, making it hard for drivers to compare and choose a suitable station.
  - Finding the right station takes many steps if filters are complex or lack the needed criteria.
  - Installing the native app and paying in multiple steps at the station interrupts the moment users need speed most.
- **UI/UX solutions:**
  - A map integrating multiple charging-station brands in one place, with real-time display for quick comparison and selection.
  - Easy-to-use filters that narrow results down to the right station.
  - A booking flow, plus a charging-progress and energy-consumption screen that stays transparent throughout the session.
  - Multi-method payment with a simple, easy flow.
  - A Zalo Mini App to scan the charging code at the station without installing the native app.
- **Scale:** 5,000+ charging sessions per day.

2. NOTT – Healthcare and Health-Monitoring Device Platform

- **Context:** Users need to monitor their health continuously with medical devices and get timely support in an emergency.
- **Insights and problems:**
  - Data from multiple devices is hard to track if each device lives in a different place
  - When a reading is abnormal, users need a clear alert and to know immediately how to respond.
  - Connecting with a doctor needs few steps, to avoid interruption in sensitive situations.
- **UI/UX solutions:**
  - An ecosystem connecting health-monitoring medical devices and showing real-time readings.
  - An emergency alert mechanism designed for sensitive situations where users need to notice and act quickly.
  - A channel for direct connection and consultation with doctors at hospitals
- **Scale:** Successfully launched, 500+ regular users

3. PLUGILO – AI-Integrated Social Network and Product Search

- **Context:** Users want to look up and compare products and make purchase decisions right inside a social network.
- **Insights and problems:**
  - Users often have to jump between several places to search, compare and gather opinions before buying.
  - Too many choices make purchase decisions difficult.
- **UI/UX solutions:**
  - Combining a social network with smart AI-powered product lookup and comparison tools in one place.
  - Optimized search flow.
  - Bringing AI into the experience to support purchase decisions.
- **Scale:** 50,000+ downloads on the App Store.
